

Boosting Security in Microsoft 365: Best Practices for Admin Access

A Critical Webinar for Public Sector Admins by Enfrasys

3pm - 4pm (MYT)

24 April 2025

Microsoft Teams (Online)

**Recent breaches have exposed a hard truth:
Admin access remains one of the weakest links in cybersecurity.**

This is not another routine webinar. It is a strategic session designed specifically for public sector professionals who manage or influence Microsoft 365 administration. The risks are real. The solutions are within reach. Now is the time to act.

What You Will Learn

✓ **Understanding Cybersecurity Threats:**

Gain insights into the latest cybersecurity threats and how they can impact your organization.

✓ **Best Practices for Secure M365 :**

Learn essential practices to ensure your account and tenant are secure and protected.

✓ **Proactive Steps to Safeguard Information:**

Discover proactive measures you can take to safeguard your information and prevent breaches.

Why This Matters

**Microsoft 365 is only as secure as the people who access it.
If your admin accounts are exposed, so is your entire environment.**

This one-hour session will equip you with practical steps to strengthen your organization's defenses using Microsoft-native tools and governance policies.

Register Now to Take Control

Your admin panel should be your strongest shield,
not your greatest vulnerability.
